

Feedback on 3-D CNS course for senior residents in Chicago August 2011:

To summarize.... the course was fabulous, exciting, informative and simply superb!

Practical and hands-on cadaveric dissection after the 3-D lectures gave a deep insight into Neuro-anatomy and its surgical significance. Needless to say, it was one of the best Neurosurgical courses that I have attended over the past six years in neurosurgical training.

The course was extremely well organized by the Congress of Neurological Surgeons. It was a platform to meet and discuss the subject in detail with Prof Albert Rhoton, Prof Michael Lawton and the all the other eminent Neurosurgeons from the States and Europe. I met with a number of fellow Neurosurgical residents from different parts of Europe, the States and Canada.

Aspiring Endoscopic Neurosurgical colleagues must attend this course. This course is strongly recommended to all the senior Neurosurgical trainees.

I thank the EANS for giving me this wonderful opportunity .I will recommend my colleagues to apply for the EANS/CNS Reciprocal award in the future and to make use of this golden opportunity!
